SMT Reflow Soldering Instructions

- The number of reflow soldering shall not exceed two times, and the time from the second processing to the first completion shall not exceed 24H
- When soldering, do not put stress on the LEDs during heating.
- Reflow temperature distribution (Acc.to J-STD-020D)

Soldering iron

- When hand soldering, the temperature of the iron must be less than 350°C for 3 seconds.
- The hand solder should be done only one time.

Repairing

Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as shown in the figure below). It should be confirmed in advance whether the characteristics of LEDs will or will not be damaged by repairing.

Storage

The package is sealed:

- 1.Recommended storage condition :At 5 °C~30°C and relative humidity 90% RH max.
- 2.It is recommended that SMD out of their original packaging are used within Three months.

The package is opened:

- 1.Completed within 24 hours.
- 2.Stored at5 °C~30°C and 60% RH or less.
- 3.LEDs stored more than 24 hours should be baked at about 65 °C±5 °C for at least 24 hours before solder assembly.

ESD

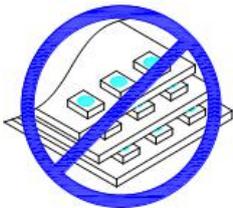

Static Electricity will damage the LED.

The following procedures may decrease the possibility of ESD damage.

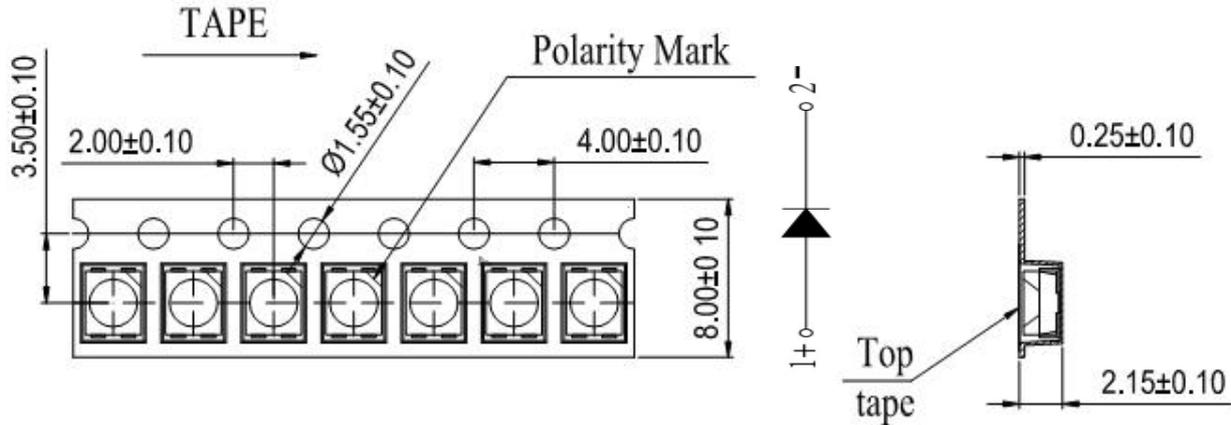

- 1.All productive machinery and test instruments must be electrically grounded.
- 2.Use a conductive wrist band or anti-electostatic glove when handling these LEDs.
- 3.Manintain a humidity level of 50%RH or higher in production areas.
- 4.Use anti-static packaging for transport and storage.

Handling Precautions

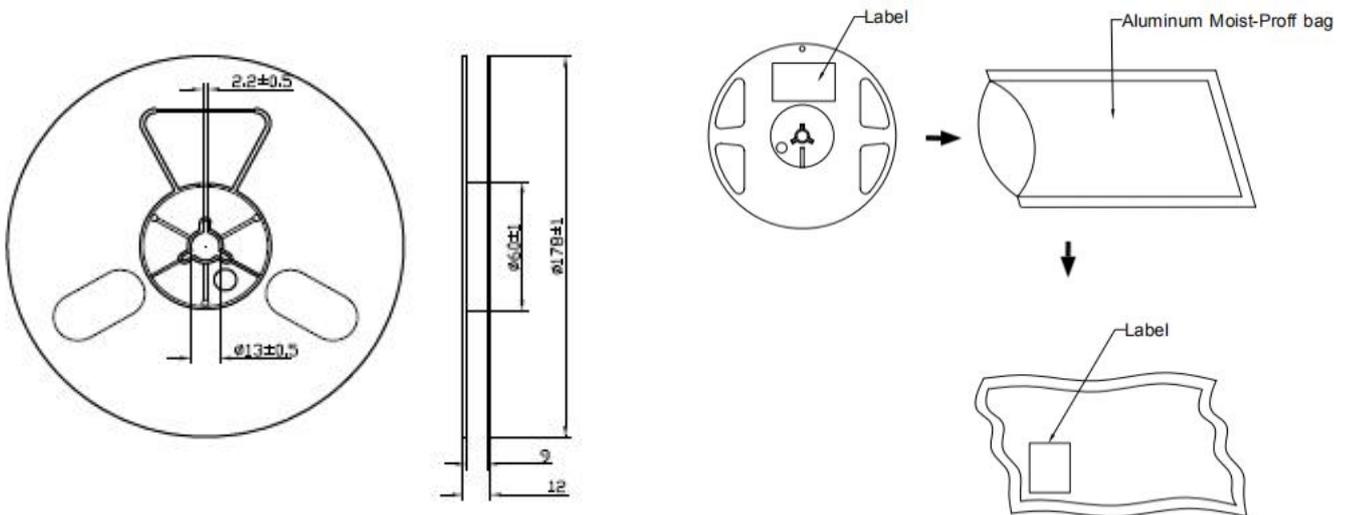

- 1.Do not stack together assembled PCBs containing LEDs. Impact may scratch the silicone lens or damage.
- 2.Not available in the situation of acidity for PH.
- 3.Electrostatic sensitive device
